## TECHNOLOGY

**IN-MOLD** – progressive production technology of ski and snowboard helmets. The upper helmet body is molded directly on the polystyrene shell at high temperature with a special technology. That's why the helmet has lower weight and luxury look.

**HARDSHELL** – injection molded ABS or polycarbonate outer shell, combined together with inner liner of polystyrene. Hard shell offers very good protection through the characteristics of the polycarbonate/ABS-material. With the hard shell technology it is possible to make very deep shells, offering a full cover protection.

**VENTING SYSTEM** – this system integrated in the helmet allows better airflow and reduces uncomfortable heat build-up in the helmet. Comfortable protection.

**SOFT EARPADS** – all offered helmets are produced with soft earpads. Your protection is not reduced.

**REMOVABLE EARPADS** – removable earpads can be detached when warm and sunny weather is.

**RUN SYSTEM** – fixing system which enables micro regulation of helmet size according to the head perimeter and ensures safety and comfortable position on the head. Suitably shaped control wheel makes easy to fix the helmet, especially for kids.

**QFS (Quick Fit System)** – fixing system which enables regulation of helmet size according to the head perimeter by very accurate anatomically shaped control wheel. QFS provide the perfect adjustment to match every individual head shape.

Mango and Etape ski and snowboard helmets meet requirements of European norm EN 1077. All Mango and Etape visors for helmets meet requirements of European norm EN 174.

**POLARVISION** – polarization filter absorbs horizontal light waves, while still allowing vertical waves to pass through. Advantage of the polarization filter is more sharply focused vision. Contours become clearer, vision in bright sunlight is perceived as considerably more relaxing and less fatiguing.

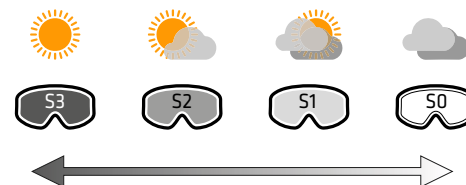

without PolarVision

with PolarVision

**FLEXVISION** – thanks to this modern technology photochromatic visors automatically adapt tint level to the ambient light. With this technology you may ski in any weather condition.

how the FlexVision visor adapts to light conditions

**ZEROFOG** – thanks to ZEROFOG technology visors are protected against fogging. With Mango and Etape visors you will have always nice and real view.

**EYEGLASSES** – With ski helmets with visor Mango and Etape you can keep your eyeglasses to enjoy comfortably your ride.

# ERGO FLEX 4X<sup>TM</sup>

## SAFETY

New material ERGOFLEX absorbs almost all impact energy in the case of hit. Sandwich construction 4X is 4 times more efficient compare to one-layer construction. The result is the new foam ERGOFLEX 4X<sup>TM</sup> giving the unique level of protection.

## COMFORT

ERGOFLEX 4X<sup>TM</sup> offers great comfort in all condition. This highly elastic foam perfectly fit to your body even during very low temperature thanks to FrostFlex<sup>TM</sup> function. Safety and comfort are provided by function MemoryFlex<sup>TM</sup> – after any deformation the foam immediately gets back to its origin shape.

## VENTILATION

ERGOFLEX 4X<sup>TM</sup> foam has porous structure to provide the optimal air circulation and micro ventilation even during long activity or higher temperature.

## FABRIC TECHNOLOGY

**SoftShell** The highly stretchable fabric, wind and water resistant with outstanding thermo-insulation features. Inner layer constitutes of functional membrane (water column 10 000 mm, breathability 10 000 g/m<sup>2</sup>/24 h). Outer layer is water repellent.

**NanoLoft** is made from soft synthetic fabrics and that's why its exceptional thermo-insulation qualities remain unchanged even when the material becomes wet. Insulation layer use mostly air molecules so this material is also very light weighted and perfectly packable.

**WindShell** Windproof fabric made of polyamide fibers with water-repellent finish. Inside protective layer increases resistance to windy and rainy weather. The fabric is very light and therefore the garment is possible to pack into small pouch.

**SuperDryntex** Fabric made from functional polyester yarn. SuperDryntex is softer, more comfortable and with more natural touch than cotton or regular synthetic fibers. Very quickly transports moisture to the outside and thanks wicking effect keeps your body comfortable. Thanks to antibacterial treatment is very easy to take care of. Different fabric grammages of SuperDryntex offer various thermo-insulation features.

**SoftCare** The new fabric SoftCare with specific treatment is really soft and warm on touch. It is suitable for wide variety sport activities. Keeps you warm but also provides perfect moisture management. It is easy to care and does not produce tangled lumps.

**ThermoFit** the highly stretchable fabric with excellent thermo-insulation features provides durability. The fabric has very good elasticity, smooth soft touch and antibacterial finish.

**Thinsulate 3M** Fabric with excellent thermal insulation features. It contains a large number of microfibers which create together with the air a very effective thermal-insulating layer.

**SmartTouch** Thanks to SmartTouch technology, you will be able to interact your touchscreen (whether it is your MP3, camera, video camera, navigation or mobile phone).

**Neopren** Three-layer fabric with excellent thermo insulation and very good elastic features. It is 100% water and wind resistant.

**ClimaWell** Three-layer fabric with excellent thermo insulation and very good elastic features. It is 100% water and wind resistant.

**Stretch** Seamless technology of Etape Stretch seat pad and its all-directions elasticity ensure maximum comfort during the bike ride. The seat pad shape and structure respect the anatomical differences of a woman body (Stretch woman) and man body (Stretch Man).

**Soft** Seamless technology of Etape Soft seat pad ensures maximum comfort during the bike ride. Better moisture management due to upper antibacterial layer. Design Soft Man for men collection.

## SIZE CHART

### MEN (UNISEX)

	S	M	L	XL	XXL	3XL
